

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	29 September 2026	Team ID	SWTID-2026-6990
Project Name	Script-Controlled ACL - Restrict Record Access Based on Field Value	Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User & Role Setup	Create the required users for testing the access-control scenarios.
FR-1	User & Role Setup	Create/assign the required roles or groups according to the access requirement.
FR-2	ACL Configuration	Create a record ACL for the required table and access operation.
FR-2	ACL Configuration	Define the required roles/groups that can attempt access.
FR-3	Script-Controlled Field Check	Check the selected field value using ACL script logic.
FR-3	Script-Controlled Field Check	Allow access when the field value satisfies the defined condition.
FR-4	Access Validation	Deny access when the user is unauthorized or the field condition is not satisfied.
FR-4	Access Validation	Test access using different users, roles and field values and record the results.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	ACL configuration, user setup and testing should be easy for administrators/developers to understand and validate.
NFR-2	Security	Record access must follow assigned roles/groups and the field-value condition; unauthorized access should be denied.
NFR-3	Reliability	The ACL should consistently return the expected access decision for valid and invalid field values.
NFR-4	Performance	ACL checks should use efficient conditions and avoid unnecessary processing so record access remains responsive.
NFR-5	Availability	Access-control logic should be available whenever the ServiceNow application is available.
NFR-6	Scalability	The solution should support additional users, roles/groups and records without redesigning the core ACL approach.
