

Project Design Phase

Solution Architecture

Date	29 September 2026
Team ID	SWTID-2026-6990
Project Name	Script-Controlled ACL - Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

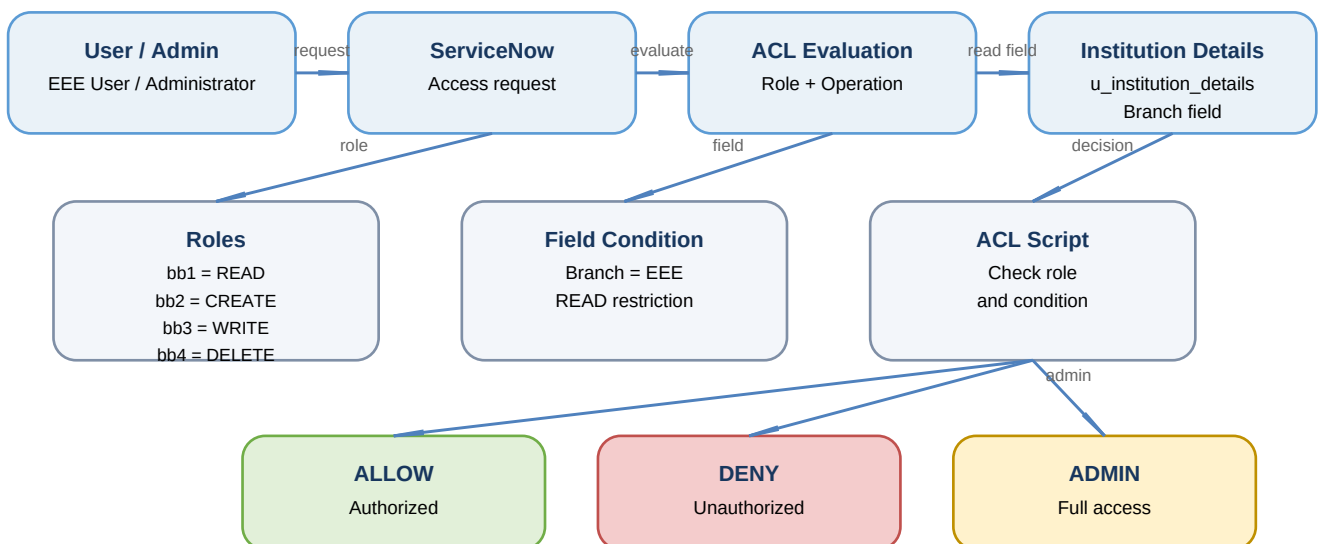

Solution Architecture:

The solution architecture defines how users, roles, the Institution Details table, and script-controlled ACLs work together to restrict record access based on the Branch field value.

- Define users and roles required for controlled access.
- Create the Institution Details table with the Branch field and required record information.
- Configure READ, CREATE, WRITE, and DELETE ACLs using roles bb1, bb2, bb3, and bb4.
- Use script logic to allow authorized access and allow administrators full access.

Solution Architecture Diagram:

Script-Controlled ACL - Access Decision Flow

Rule: bb1 controls READ of EEE records; bb2, bb3 and bb4 control CREATE, WRITE and DELETE. Administrators retain full access.
