

Acceptance Testing

UAT Execution & Report Submission

Date	29 September 2026
Team ID	SWTID-2026-6990
Project Name	Script-Controlled ACL - Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the UAT coverage for the ServiceNow Script-Controlled ACL project. The testing verifies that record access is correctly controlled using user roles together with the Branch field value, and that administrators retain full access.

2. Defect Analysis

This section records defects identified during UAT. The project documentation provided for this task does not contain a completed defect log, so actual defect counts are left as "Not Recorded" rather than being assumed.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Duplicate	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
External	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Fixed	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Not Reproduced	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Skipped	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Won't Fix	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Totals	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded

3. Test Case Analysis

Planned UAT coverage is organized around the project's access-control operations and validation activities. Actual pass/fail results should be updated after execution.

Section	Total Cases	Not Tested	Fail	Pass
User & Role Setup	2	2	0	0
READ ACL	2	2	0	0
CREATE ACL	1	1	0	0
WRITE ACL	1	1	0	0
DELETE ACL	1	1	0	0
Administrator Access	1	1	0	0
Negative / Unauthorized Access	2	2	0	0

UAT Coverage Summary

Area	UAT Check
User setup	EEE User created and roles bb1, bb2, bb3 and bb4 assigned.
Record data	Institution Details records include ECE, EEE and CSE Branch values.
READ access	Verify bb1 user can view EEE records and unauthorized users are denied.
CREATE access	Verify users with bb2 can create records.
WRITE access	Verify users with bb3 can edit permitted records.
DELETE access	Verify users with bb4 can delete permitted records.
Admin access	Verify admin users retain full access regardless of Branch.

Exception Reporting

No completed exception or defect records were provided in the project documentation. During UAT, record any issue involving unexpected access, denial of valid access, role assignment, field conditions, or ACL script behaviour.

Final Report Output

The final UAT report should capture executed test cases, actual results, open/closed defects, and confirmation that the ACL behaves correctly across forms and lists for authorized and unauthorized users.

Version Control

Version 1.0 - UAT report prepared for the Script-Controlled ACL project on 29 September 2026. Future revisions should record the change date, tester, changed section, and reason for the update.

UAT Acceptance Criteria

The solution is ready for acceptance when the required ACL operations behave as defined: authorized roles receive the intended access, unauthorized users are denied, and administrators retain full access.
